

“What is your investment doing right now”

E-Log provides real-time monitoring and logging of the activity of heavy-lifting and other assets. With real-time visibility of crane activity, crane owners, hirers and project managers are able to monitor performance, activity and safety enabling them to maximise productivity, utilisation and profitability.

E-Log is able to monitor lifting, safety and location data for all types of cranes. It provides a customisable, user-friendly solution for your fleet monitoring needs.

E-Log is specifically designed to increase operating efficiency and utilisation by ensuring early response to factors that may otherwise cause delays. Crane location and activity points to the crane's current tasks, the availability of people and materials and the pace of work, and these can all be viewed in real-time and responded to by managers quickly. Crane duty cycles including loads and frequencies of lifting can be used to optimise crane fleet maintenance costs and reliability.

A Plant Manager's Dream.....

absolute fleet control and visibility without leaving the office.

Some standard features of the E-Log include:

- ▲ Equipment Tracking (GPS)
- ▲ Engine Monitoring
- ▲ Service Intervals / Scheduling
- ▲ Lift Configurations (Crane Applications)
- ▲ Equipment Utilization
- ▲ Equipment Reports and Graphs
- ▲ Real-time Data Capture
- ▲ One Website Access
